

Name: Gomonsang, Harlyn Grace M.

Year/Course/Section: 3-BSCS-B

The screenshot shows a web browser window displaying the MySQL Community Downloads page. The address bar shows the URL `dev.mysql.com/downloads/`. The browser's address bar includes navigation buttons (back, forward, refresh) and a search bar. Below the address bar, there are links to various e-commerce sites: Booking.com, Amazon.com, AliExpress, Lazada, and Agoda.com. A notification bar at the top of the page asks, "Would you like to make Opera your everyday browser? How do I do that?" with a button to "Yes, set it as default browser". The main heading is "MySQL Community Downloads". Below the heading, there are two columns of links, each preceded by a small orange dot. The left column includes: MySQL Yum Repository, MySQL APT Repository, MySQL SUSE Repository, MySQL Community Server, MySQL Cluster, MySQL Router, MySQL Shell, MySQL Workbench, MySQL Installer for Windows, and MySQL for Visual Studio. The right column includes: C API (libmysqlclient), Connector/C++, Connector/J, Connector/NET, Connector/Node.js, Connector/ODBC, Connector/Python, MySQL Native Driver for PHP, MySQL Benchmark Tool, Time zone description tables, and Download Archives. At the bottom of the page, there is an Oracle logo followed by the text "© 2021, Oracle Corporation and/or its affiliates". Below this, there are links for Legal Policies, Your Privacy Rights, Terms of Use, Trademark Policy, Contributor Agreement, and Cookie Preferences. The browser's taskbar at the bottom shows a search bar with the text "Type here to search", several application icons (Opera, File Explorer, Mail, Settings, etc.), and system tray information including the date and time (8:57 pm, 15/11/2021) and weather (25°C, Heavy t-storms).

Installation

Installation Complete

Choosing a Setup Type

Please select the Setup Type that suits your use case.

- ☒ **Developer Default**
Installs all products needed for MySQL development purposes.
- ☐ **Server only**
Installs only the MySQL Server product.
- ☐ **Client only**
Installs only the MySQL Client products, without a server.
- ☐ **Full**
Installs all included MySQL products and features.
- ☐ **Custom**
Manually select the products that should be installed on the system.

Setup Type Description

Installs the MySQL Server and the tools required for MySQL application development. This is useful if you intend to develop applications for an existing server.

This Setup Type includes:

- * MySQL Server
- * MySQL Shell
The new MySQL client application to manage MySQL Servers and InnoDB cluster instances.
- * MySQL Router
High availability router daemon for InnoDB cluster setups to be installed on application

Authentication Method

☒ **Use Strong Password Encryption for Authentication (RECOMMENDED)**

MySQL 8 supports a new authentication based on improved stronger SHA256-based password methods. It is recommended that all new MySQL Server installations use this method going forward.

Attention: This new authentication plugin on the server side requires new versions of connectors and clients which add support for this new 8.0 default authentication (caching_sha2_password authentication).

Currently MySQL 8.0 Connectors and community drivers which use libmysqlclient 8.0 support this new method. If clients and applications cannot be updated to support this new authentication method, the MySQL 8.0 Server can be configured to use the legacy MySQL Authentication Method below.

☐ **Use Legacy Authentication Method (Retain MySQL 5.x Compatibility)**

Using the old MySQL 5.x legacy authentication method should only be considered in the following cases:

- If applications cannot be updated to use MySQL 8 enabled Connectors and drivers.
- For cases where re-compilation of an existing application is not feasible.
- An updated, language specific connector or driver is not yet available.

Security Guidance: When possible, we highly recommend taking needed steps towards upgrading your applications, libraries, and database servers to the new stronger authentication. This new method will significantly improve your security.

The MySQL Shell is an advanced MySQL client application that can be used to work with single MySQL Server instances. Further, it can be used to create and manage an InnoDB cluster, an integrated solution for high availability and scalability of MySQL databases, without requiring advanced MySQL expertise.

```
graph LR; ClientApp[Client App] --> MySQLRouter[MySQL Router]; MySQLRouter --> MySQLShell[MySQL Shell]; MySQLShell --> InnoDBCluster[InnoDB Cluster];
```

26°C Rain showers 10:45 pm 15/11/2021

The image shows the MySQL Workbench application window. The title bar reads "MySQL Workbench". The menu bar includes "File", "Edit", "View", "Database", "Tools", "Scripting", and "Help". On the left is a dark sidebar with icons for Home, Recent, Servers, and Connections. The main area has a large heading "Welcome to MySQL Workbench". Below it is a paragraph describing the tool as the official GUI for MySQL. At the bottom left, under "MySQL Connections", a connection named "Local instance MySQL80" is listed with user "root" and host "localhost:3306". The bottom of the screen shows the Windows taskbar with a search bar, task view icon, and several application icons. The system tray on the right shows the date and time as 10:46 pm on 15/11/2021, along with weather and language settings.

Welcome to MySQL Workbench

MySQL Workbench is the official graphical user interface (GUI) tool for MySQL. It allows you to design, create and browse your database schemas, work with database objects and insert data as well as design and run SQL queries to work with stored data. You can also migrate schemas and data from other database vendors to your MySQL database.
